

Supply Chain Solutions...  
**adding value to your business**

We try harder

# Why Choose Fasteq ?

Fasteq offer a full supply chain solution, fully equipped to meet increasing compliance demands, with value added services to reduce cost and administration whilst providing Quality Assurance peace of mind. Specialists in the supply of mechanical hardware and Class C components and Value Added Service to the following markets:

- Aerospace & Defence
- Automotive
- Manufacturing
- Fabrication
- Nuclear
- Oil & Gas
- Industrial
- Construction
- Electronics

- We are committed to taking major costs out of your supply chain
- We will help reduce your overall spend on hardware and Class C components
- We have excellence and core competency over a far greater product range than our competitors
- Our formulaic approach provides a true supply chain management solution
- We are accredited to ISO9001:2008 and AS9120- Rev A
- We have recently been awarded SC21 Bronze Status

# Value Add Services

Fasteq's inventory management and supply chain solutions can revolutionise the way your company operates.

We give assurances that many indirect costs will be reduced, which will in turn increase productivity and profitability within the client base. All of the hardware shipped from our warehouse to your production area is fully traceable and supplied in accordance with our AS9120 registration. DLF customers receive customised monthly stock usage reports and inventory turns. Our bar coding data collection system can produce the information required and cost apportioned to individual work cell or factory area. DLF deliveries are consistently 100% on-time.

## Core Competencies

- Warehouse Management
- Kitting
- Direct Line Feed solutions
- C Class Part Management
- Supply Chain Management
- Ultrasonic Cleaning
- Distribution
- Export Licensing and ITAR control

# Our Commitment to Quality

We are committed to supplying a consistently high quality of product. To achieve this, we invest in both staff and equipment to verify product on site:

- Dedicated Quality and Inspection departments - committed to continuous improvement, constantly striving towards our goal of zero defects.
- Bespoke computerised inspection system - logs and permanently records all data against required dimensions.

- With our expertise and proven track record and ISO/AS9120 approvals, many clients delegate inspection to us, adding value to their business by freeing up in-house resource.
- Fasteq are committed to measuring and exceeding our customers' expectation for product, quality and performance.

# Continuous Improvement

- **Certificate of Conformity**
- **Documented audit**
- **Online drawings and specifications**
- **Inspection and Verification**
- **XRF testing**
- **Tensile strength testing**
- **Export Licensing and ITAR control as last point**

# Meaningful Certification

How reliable is your fastener supplier certification?

## FACT 1

Not one of the major stainless steel fastener stockists in Europe will issue a signed Certificate of Conformity with their products. So even although the parts may be stamped with the A2-70 or A4-80 head markings, you cannot be certain that the material and hardness/designation is achieved

## FACT 2

The EIF(European Industrial Fastener Institute) are so concerned with the standards of imports of sub standard stainless steel fasteners that they have written to the European Anti Fraud Office calling for an investigation: *“sub standard stainless steels have been used in the manufacture of fasteners which clearly do not comply with the standards inferred by their head markings. Buyers need to be on thier guard for fraudulent products”*

Dr Guiseppe Marzorati, Chairman of the EIFI Stainless Steel Fastener Group

## FACT 3

Fasteq have an in-house solution offering total peace of mind

## ○ Fasteq Core Product Range
